October 8th, 2013 - PRMS Releases Update to Enterprise Dashboard System (EDS)

LITTLE ROCK, AR - Precision Risk Management Systems, Inc has announced the latest release of its Enterprise Dashboard System (EDS). EDS provides executive dashboard reporting, management reporting and scheduled report delivery to users. With this release of EDS, users have enhanced report creation capabilities and new scorecard functionality for loan officers, branches, regions, etc. Also in this release is new functionality that allows user security parameters to be passed through to the data integration tier. This gives system administrators the ability to use existing Microsoft SQL Server functions and stored procedures for data access and filtering in generating reports.

"This release has a lot of powerful enhancements in the core data integration layer of the system. By leveraging pre-existing SQL Server objects, we've increased efficiency and shortened our implementation timeframes. This is especially important for our vendor partners that use EDS as the reporting backbone of core systems such as LOS and servicing." - Greg Ellis, President

About the Company
